Data Note: Supply (retail sales) estimates sales to consumers by establishments. Sales to businesses are excluded. Demand (retail potential) estimates spent by consumers at retail establishments. Supply and demand estimates are in current dollars. The Leakage/Surplus Factor presents a snapshot is a measure of the relationship between supply and demand that ranges from +100 (total leakage) to -100 (total surplus). A positive value represe opportunity outside the trade area. A negative value represents a surplus of retail sales, a market where customers are drawn in from outside the trepresents the difference between Retail Potential and Retail Sales. Esri uses the North American Industry Classification System (NAICS) to classify primary type of economic activity. Retail establishments are classified into 27 industry groups in the Retail Trade sector, as well as four industry groups are classified into 27 industry groups in the Retail Trade sector, as well as four industry groups in the Retail Trade sector, as well as four industry groups in the Retail Trade sector, as well as four industry groups in the Retail Trade sector, as well as four industry groups in the Retail Trade sector, as well as four industry groups in the Retail Trade sector, as well as four industry groups in the Retail Trade sector, as well as four industry groups in the Retail Trade sector, as well as four industry groups in the Retail Trade sector, as well as four industry groups in the Retail Trade sector, as well as four industry groups in the Retail Trade sector, as well as four industry groups in the Retail Trade sector, as well as four industry groups in the Retail Trade sector, as well as four industry groups in the Retail Trade sector, as well as four industry groups in the Retail Trade sector, as well as four industry groups in the Retail Trade sector, as well as four industry groups in the Retail Trade sector and the Retail Trade sector as four industry groups in the Retail Trade sector and the Retail Trade sector and the Retail Trad	of retail opportunity. Data Note: Supply (retail sales) estimates sales to consumers by establishments. Sales to businesses are excluded. Demand (retail potential) estimates the expected amount spent by consumers at retail establishments. Supply and demand estimates are in current dollars. The Leakage/Surplus Factor presents a snapshot of retail opportunity. This is a measure of the relationship between supply and demand that ranges from +100 (total leakage) to -100 (total surplus). A positive value represents 'leakage' of retail opportunity outside the trade area. A negative value represents a surplus of retail sales, a market where customers are drawn in from outside the trade area. The Retail Gap represents the difference between Retail Potential and Retail Sales. Esri uses the North American Industry Classification System (NAICS) to classify businesses by their primary type of economic activity. Retail establishments are classified into 27 industry groups in the Retail Trade sector, as well as four industry groups within the Food Services & Drinking Establishments subsector. For more information on the Retail MarketPlace data, please click the link below to view the Methodology Statement. http://www.esri.com/library/whitepapers/pdfs/esri-data-retail-marketplace.pdf
